

VEHICLE FUEL DELIVERY MANAGEMENT SYSTEM

A project submitted to the Bharathidasan University
in partial fulfillment of the requirements for the award
of the Degree of

BACHELOR OF SCIENCE IN COMPUTER SCIENCE

Submitted by

S.S.A. KIRTHIK VYSHNAV
205114403

Under the guidance of

Dr. B. GAYATHRI MCA., M.Phil., Ph.D.,
Associate Professor,
PG DEPARTMENT OF COMPUTER SCIENCE (SF-II)
BISHOP HEBER COLLEGE (AUTONOMOUS),
TIRUCHIRAPPALLI - 620017.

PG DEPARTMENT OF COMPUTER SCIENCE (SF-II)
BISHOP HEBER COLLEGE (AUTONOMOUS)

(Nationally Reaccredited at the 'A' Grade by NAAC with the CGPA of 3.58 out of 4) (Recognized by UGC as "College of Excellence") (Affiliated to Bharathidasan University)

TIRUCHIRAPPALLI-620 017

APRIL – 2023

DECLARATION

I hereby declare that the project work presented is originally done by me under the guidance of **Dr. B. GAYATHRI MCA., M.Phil., Ph.D., Associate Professor, PG Department of Computer Science (SF-II), Bishop Heber College (Autonomous), Tiruchirappalli-620 017** and has not been included in any other project submitted for any other degree.

Name of the Candidate : S.S.A. KIRTHIK VYSHNAV

Register Number : 205114403

Batch : 2020-2023

Signature of the Candidate

Dr. B. GAYATHRI MCA., M.Phil., Ph.D.,
Associate Professor,
PG Department of Computer Science (SF-II),
Bishop Heber College (Autonomous),
Tiruchirappalli – 620017

Date:

CERTIFICATE

This is to certify that the project work entitled “**VEHICLE FUEL DELIVERY MANAGEMENT SYSTEM**” is a bonafide record work done by **SSA. KIRTHIK VYSHNAV 205114403** in partial fulfillment of the requirements for the award of the degree of **BACHELOR OF SCIENCE IN COMPUTER SCIENCE** during the period **2020- 2023**.

Place:

ACKNOWLEDGEMENT

First, I am very thankful to the almighty for showering the Blessings throughout my life. I would like to express my heartfelt thanks to my beloved parents who have sacrificed a lot for my future. This support was the foundation stone for my efforts.

I acknowledge my sincere thanks to **Dr. D. PAUL DHAYABARAN, M.Sc., M.Phil. PGDCA., Ph.D.**, Principal, Bishop Heber College (Autonomous), Tiruchirappalli, for giving me the opportunity to do my Undergraduate Degree course in the renowned institution and providing facilities to carry out the project work.

I submit my heartfelt thanks to **Dr. J.G.R. SATHIASEELAN, M.Sc., Ph.D.**, Vice Principal (SF-II), Associate Professor, Co-ordinate of Computer Science, IT & CA, Bishop Heber College, Tiruchirappalli, for his guidance and support in successful completion of the project work.

I am very proud and thankful to **Dr. G. SOBERS SMILES DAVID M.C.A., M.Phil. NET., Ph.D.**, Associate Professor and Head, PG Department of Computer Science, Bishop Heber College, Tiruchirappalli, for giving me the opportunity to do the course in the college.

I am grateful to **Dr. B. GAYATHRI MCA., M.Phil., Ph.D.**, Associate Professor, PG Department of Computer Science (SF-II), Bishop Heber College (Autonomous), Tiruchirappalli, the internal guide for timely suggestions and constant encouragement and support that led to the accomplishment of the project.

I extended my thanks to all faculty members of PG Department of Computer Science (SF-II) for their support and motivation towards my entire journey of my course.

I wish to express my heartfelt thanks to my friends for their continuous encouragement and assistance right from the beginning to the end of the journey of my project.

S.S.A. KIRTHIK VYSHNAV

SYNOPSIS

The aim of ‘ Vehicle Fuel Delivery Management System’ is to automate its existing manual system by the help of computerized equipment and full-fledge computer software, fulfilling their requirements so that their valuable data can be stored for a longer period with easy accessing and manipulation of the same. Basically, the project describes how to handle good performance and provide better services to clients. This project can lead to error free, secure, reliable and fast management system. This system will help the organization in better utilization of resources. The Fuel Conveyance The board Framework Venture in PHP has been intended to abrogate the issue of the current manual framework. This web application is upheld to wipe out and, at times, diminish the difficulty looked by the manual frameworks. The application is decreased however much as could be expected to stay away from mistakes while entering the information. It likewise gave a message while entering invalid information. No proper information is expected for the client to work this framework. Generally speaking, we said that Fuel Conveyance The executives Undertaking in PHP is easy to use.

1. PROJECT DESCRIPTION

1.1 INTRODUCTION

The Vehicle Fuel Delivery Management System has been designed to override the problem of existing manual system. This web application is supported to eliminate and, in some case, reduce the hardship faced by manual system. The application is reduced as much as possible to avoid errors while entering the data. It's also provide message while entering invalid data. No formal knowledge is required for the user to operate this system. Overall, we said that Fuel Delivery Management System is user friendly.

In Vehicle Fuel Delivery Management System, we use PHP and MySQL Database. This project fulfills the online demand of fuels which is order by users. Vehicle Fuel Delivery Management System has three modules i.e., admin, fuel station owner and user.

1.2 EXISTING SYSTEM

The present scenario offers manual data entry. A lot of time is wasted in creating the reports as well as maintaining them. In case, if any query arises to get the information about the fuel order, queries and registered users, the whole report is re-typed or xeroxed. This seriously affects the authentication of the system. This Vehicle Fuel Delivery Management System is totally outdated and involves high risk of ambiguity and redundancy.

1.3 PROPOSED SYSTEM

The proposed Vehicle Fuel Delivery Management System is to have everything completely automated and computerized. The software is very easy to use and manage even for a non-technical person. The redundancy and ambiguity will be removed by assigning every order a unique number (i.e Order Number).

1.3.1 HARDWARE SPECIFICATION

- Processor : Dual core processor 2.6.0 GHz
- RAM : 1GB
- Hard disk : 160 GB
- Compact Disk : 650 MB
- Keyboard : Standard keyboard
- Monitor : 15-inch color monitor

1.3.2 SOFTWARE SPECIFICATION

- Front End : PHP
- MySQL : MySQL
- Platform : Windows 10 Pro

2. LOGICAL DEVELOPMENT

2.1 DATA FLOW DIAGRAM

A two-dimensional diagram explains how data is processed and transferred in a system. The graphical depiction identifies each source of data and how it interacts with other data sources to reach a common output. Individuals seeking to draft a data flow diagram must identify external inputs and outputs, determine how the inputs and outputs relate to each other, and explain with graphics how these connections relate and what they result in. This type of diagram helps business development and design teams visualize how data is processed and identify or improve certain aspects.

LEVEL 0

DFD Level 0 is also called a Context Diagram. It's a basic overview of the whole system or process being analyzed or modeled. It's designed to be an at-a-glance view, showing the system as a single high-level process, with its relationship to external entities. It should be easily understood by a wide audience, including stakeholders, business analysts, data analysts and developers.

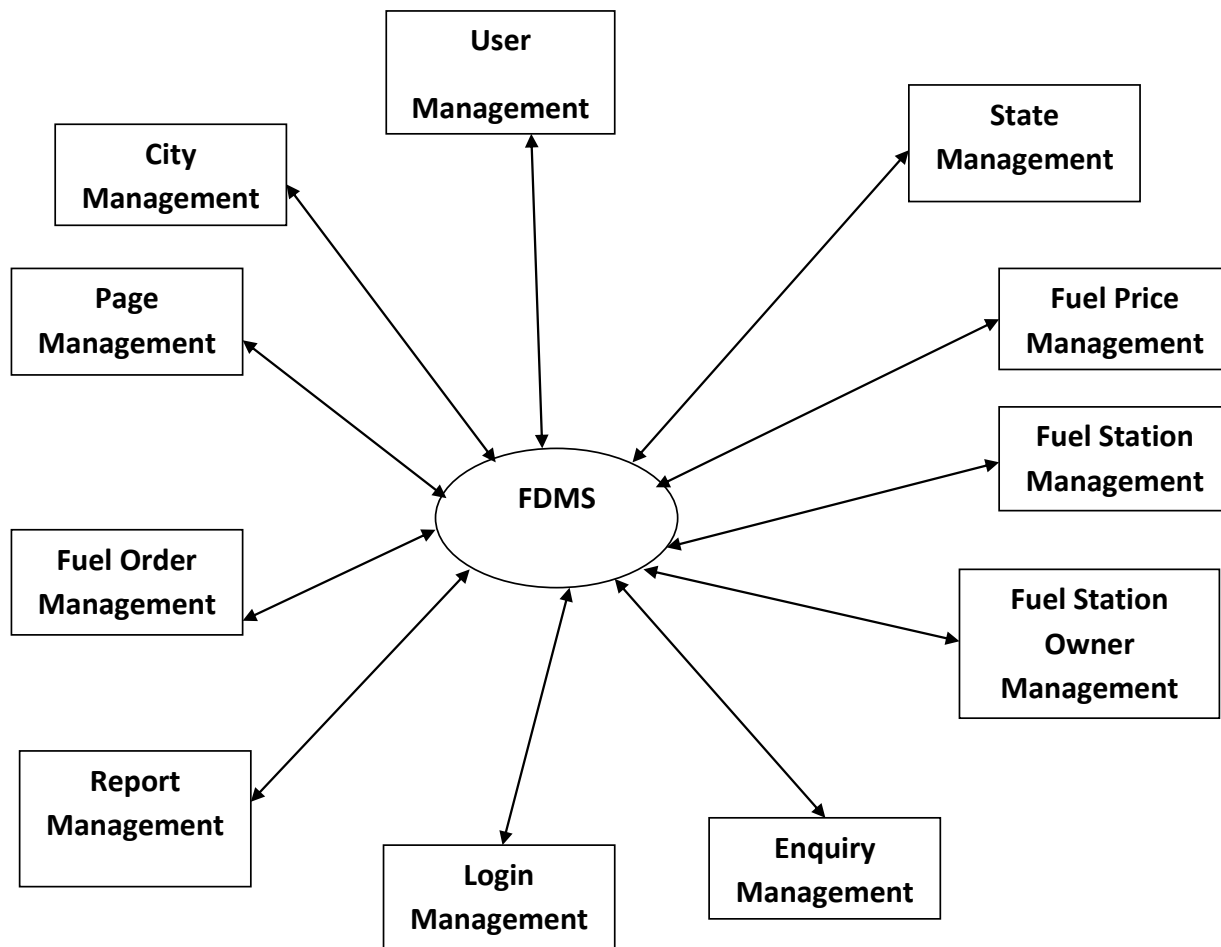

Fig 2.1 level 0 DFD

LEVEL 1

DFD Level 1 provides a more detailed breakout of pieces of the Context Level Diagram. You will highlight the main functions carried out by the system, as you break down the highlevel process of the Context Diagram into its sub – processes. A level 1 data flow diagram (DFD) is more detailed than a level 0 DFD but not as detailed as a level 2 DFD. It breaks down the main processes into sub processes that can then be analyzed and improved on a more intimate level.

First Level DFD

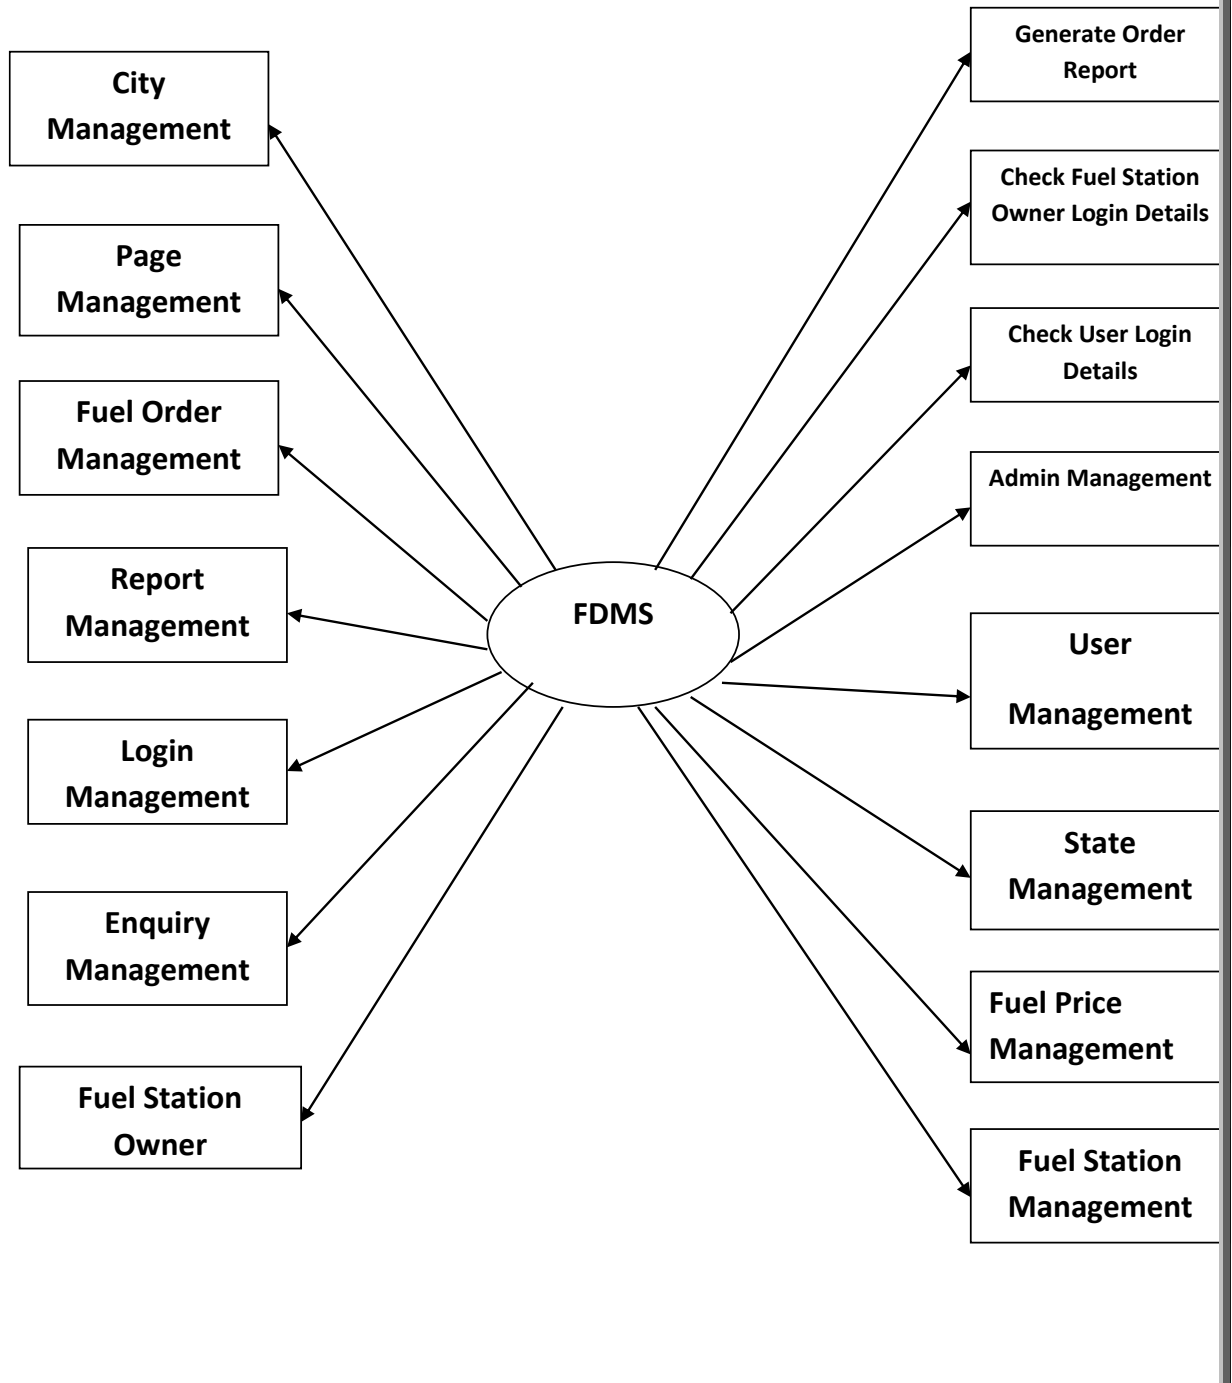

Fig 2.2 level 1 DFD

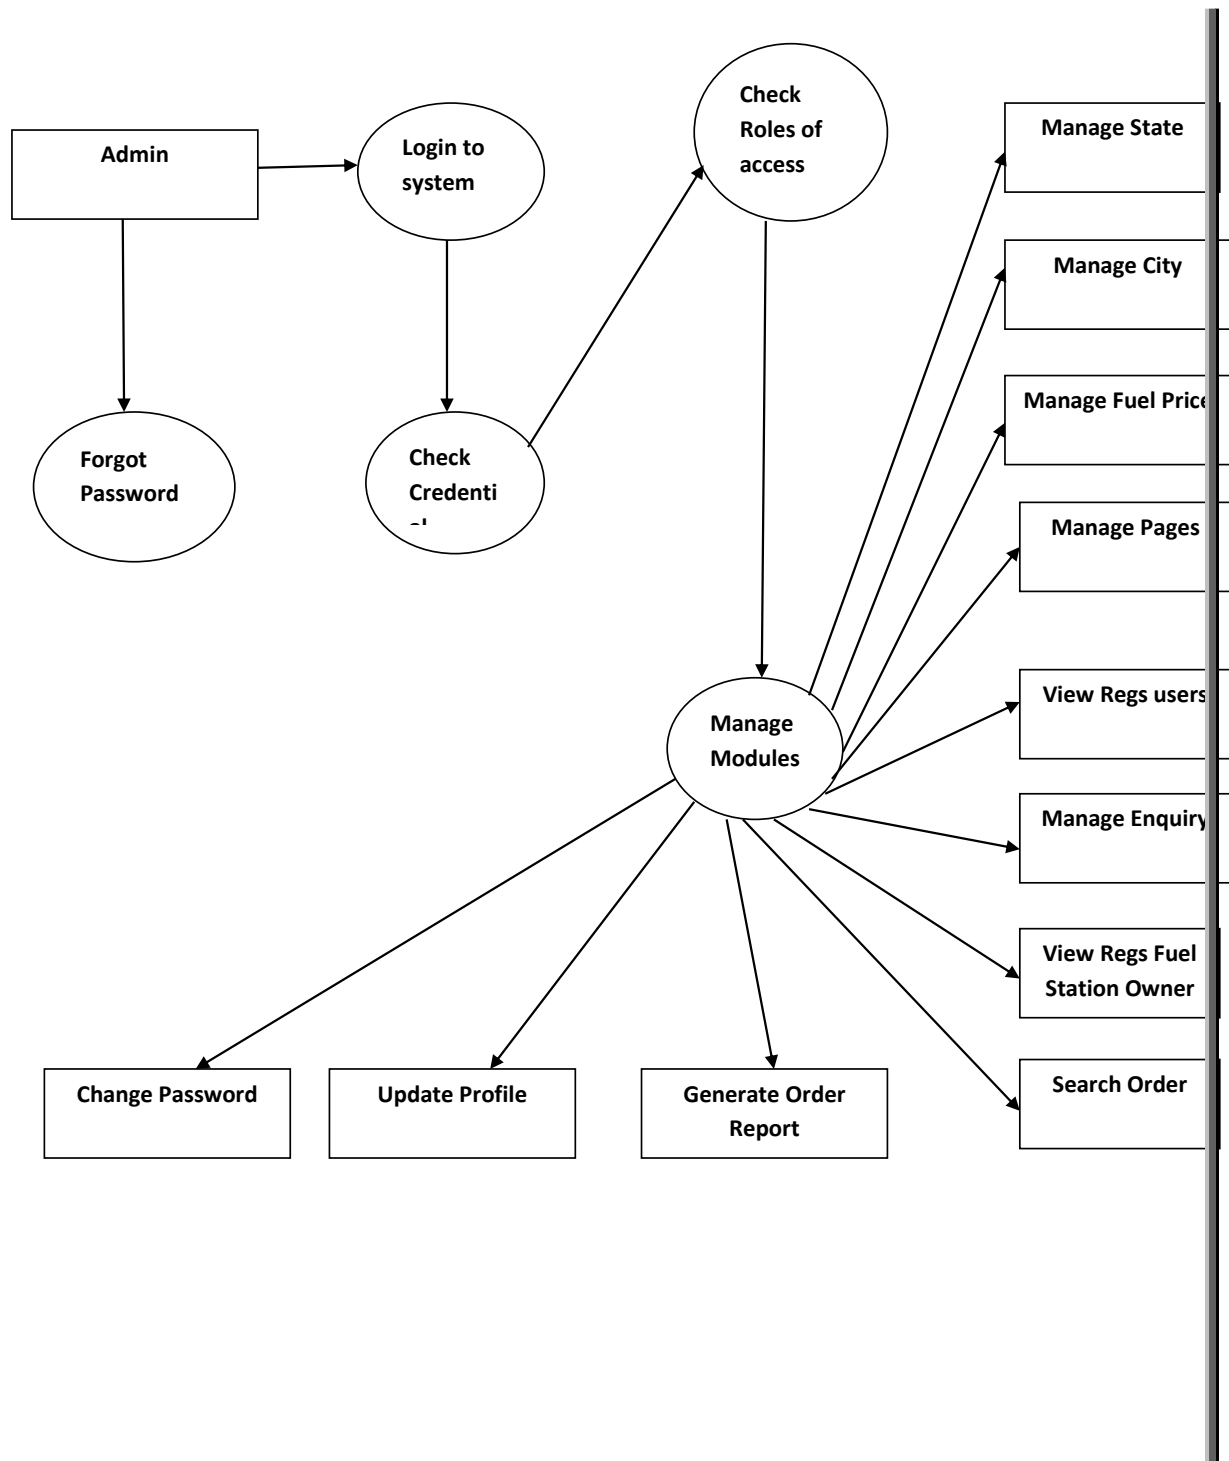

Fig 2.3 level 2 DFD

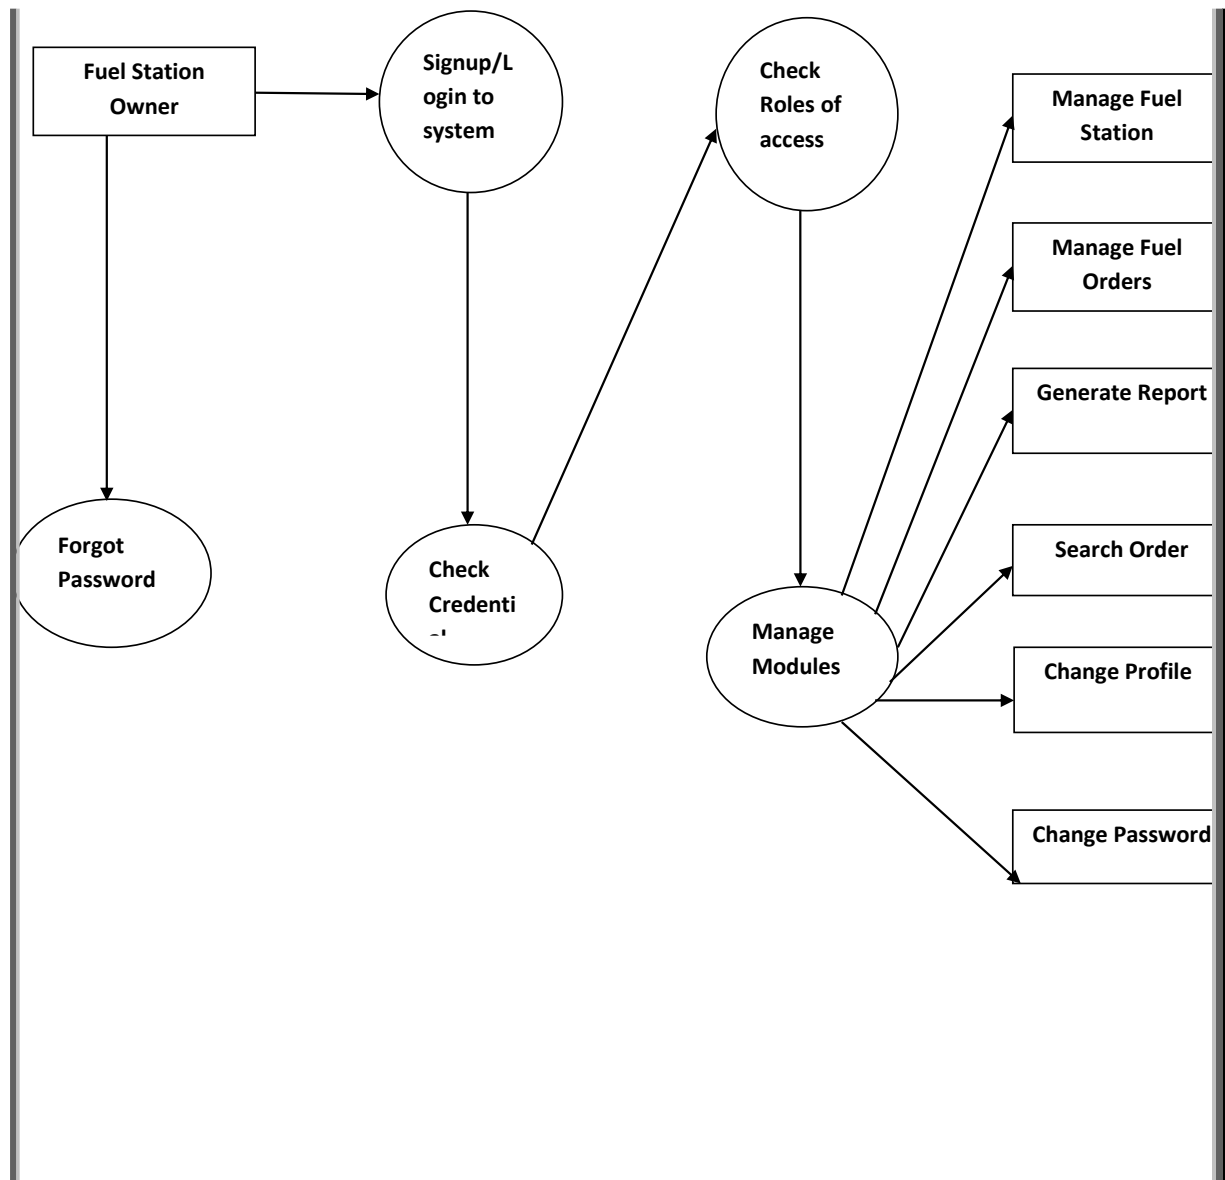

Fig 2.3 level 2 DFD

2.2 ARCHITECTURE DESIGN

A system architecture or systems architecture is the conceptual model that defines the structure, behavior, and more views of a system. An architecture description is a formal description and representation of a system, organized in a way that supports reasoning about the structures and behaviors of the system. System architecture can comprise system components, the externally visible properties of those components, the relationships (e.g., the behavior) between them. It can provide a plan from which products can be procured, and systems developed, that will work together to implement the overall system. There have been efforts to formalize languages to describe system architecture; collectively these are called architecture description languages (ADLs).

Various organizations define systems architecture in different ways, including:

- An allocated arrangement of physical elements which provides the design solution for a consumer product or life-cycle process intended to satisfy the requirements of the functional architecture and the requirements baseline.
- Architecture comprises the most important, pervasive, top-level, strategic inventions, decisions, and their associated rationales about the overall structure (i.e., essential elements and their relationships) and associated characteristics and behaviour.
- If documented, it may include information such as a detailed inventory of current hardware, software and networking capabilities; a description of long-range plans and priorities for future purchases, and a plan for upgrading and/or replacing dated equipment and software.

An architecture diagram is a graphical representation of a set of concepts that are part of architecture, including their principles, elements and components. Architecture diagram can help system designers and developers visualize the high-level, overall structure of their system or application, in order to ensure the system meets their users' needs. Using architecture diagram, you can also describe patterns that are used throughout the design. It's somewhat like a blueprint that you use as a guide, so that you and your colleagues can discuss, improve and follow.

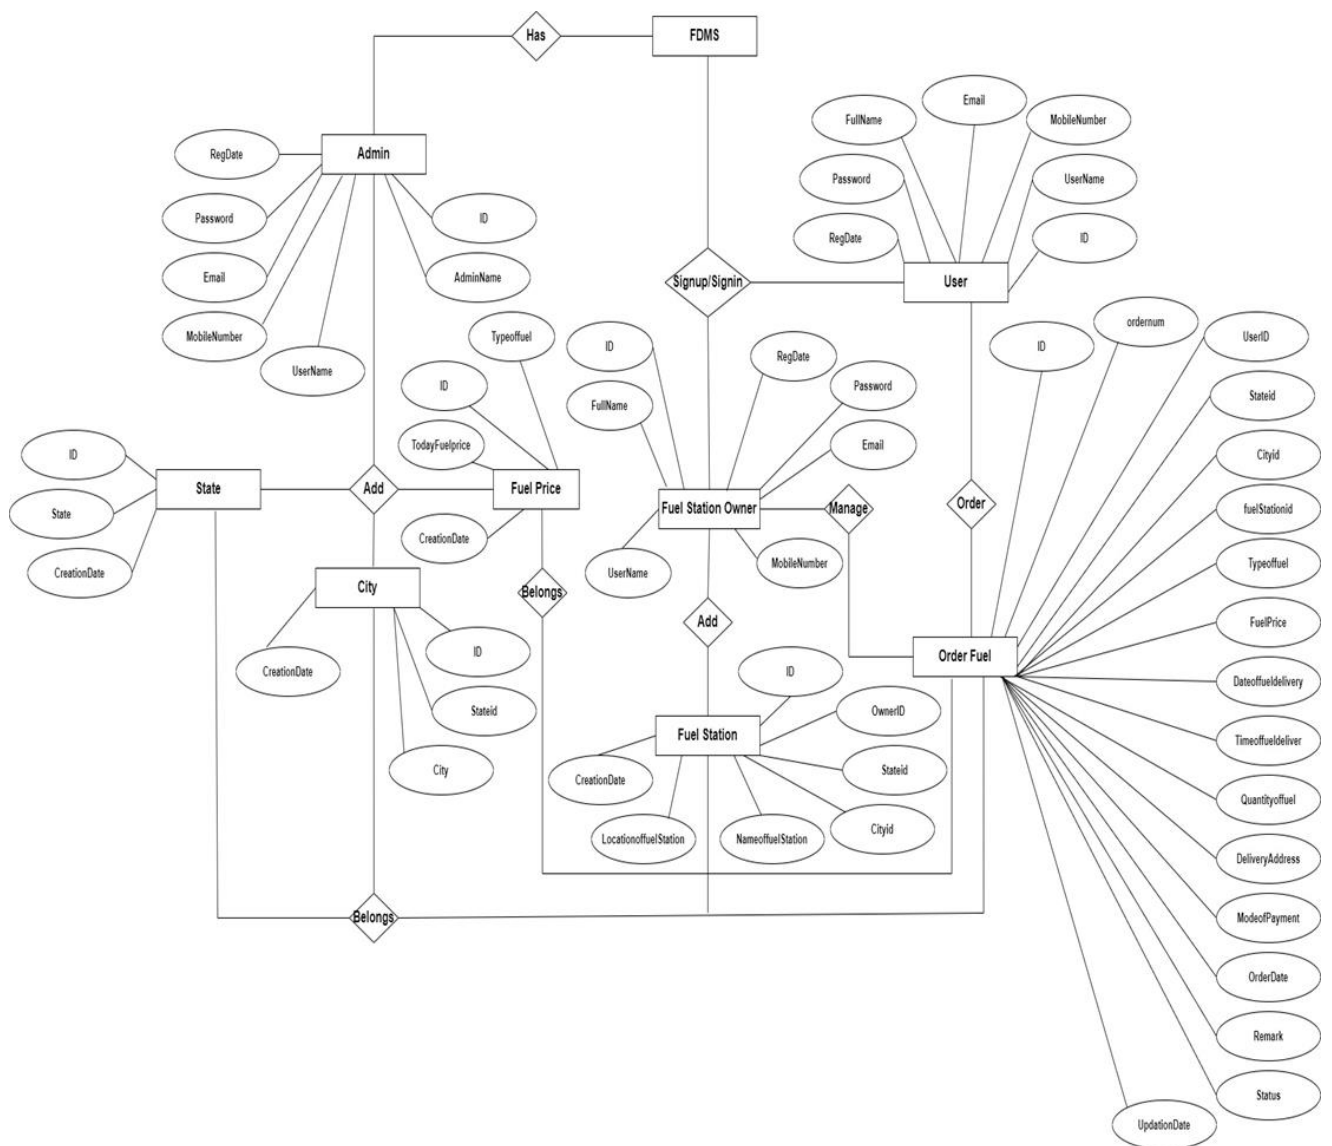

Fig 2.2.1 System Architecture

3. PROGRAM DESIGN

Software design is a creative activity in which you identify software components and their relationships, based on a customer's requirements. Implementation is the process of realizing the design as a program. Program design includes planning for the learning environment and experience, through conceptualizing change and selecting program activities to bring about desired results. Program design fits into the “Conceptualize Change” and “Design” sections of Extension's Framework for Ongoing Program Development.

3.1 MODULES

ADMIN

- Dashboard
- State
- City
- Fuel Price
- Page
- Reports
- Enquiry
- Search
- Reg User
- Reg Fuel Station Owner

FUEL STATION OWNER MODULE

- Dashboard
- Fuel Station
- Order of Fuel
- Reports
- Search

USER MODULE

- Dashboard
- Order Your Fuel
- Order Status
- Search

3.2 MODULES DESCRIPTION

ADMIN

1. **Dashboard:** In this section, admin can briefly view the total registered users, total registered fuel station owner, total state, total city, total read enquires and total unread enquires.
2. **State:** In this section, admin can manage state (add/update/delete).
3. **City:** In this section, admin can manage city (add/update/delete).
4. **Fuel Price:** In this section, admin can manage fuel price (add/delete).
5. **Page:** In this section, admin can manage about us and contact us pages.
6. **Reports:** In this section admin can view order details of fuel which is received by fuel station in a particular period.
7. **Enquiry:** In this section, admin can view and maintain the enquiry.
8. **Search:** In this section, admin can search order details with the help of his/her mobile number and order number.
9. **Reg Users:** In this section, admin can view the detail of registered users.
10. **Reg Fuel Station Owner:** In this section, admin can view the detail of registered fuel station owner.

Admin can also update his profile, change the password and recover the password.

FUEL OWNER MODULE

1. **Dashboard:** In this section, owner can briefly view the total fuel station, total new order, total confirmed order, total cancelled order, total on the way order and total delivered order.
2. **Fuel Station:** In this section, owner can manage fuel station(add/delete/update).
3. **Order of Fuel:** In this section, owner can view the fuel orders which are received by different fuel station and also have right to change the status of order according to current status.
4. **Reports:** In this section owner can view order details of fuel which is received by fuel station in a particular period.
5. **Search:** In this section, owner can search order details with the help of his/her mobile number and order number.

Fuel station owner can also update his profile, change the password and recover the password.

USER MODULE

User must be register himself/herself for ordering online fuel.

1. **Dashboard:** It is welcome page for users.
2. **Order Your Fuel:** In this section, user can order fuel(Petrol or Diesel).
3. **Order Status:** In this section, user can view the status of his fuel order.
4. **Search:** In this section, user can search order with the help of order number, name and mobile number.

User can also update his profile, change the password and recover the password.

4. TESTING

Testing is a series of different tests that whose primary purpose is to fully exercise the computer-based system. Although each test has a different purpose, all work should verify that all system element has been properly integrated and performed allocated function. Testing is the process of checking whether the developed system works according to the actual requirement and objectives of the system. The philosophy behind testing is to find the errors. A good test is one that has a high probability of finding an undiscovered error. A successful test is one that uncovers the undiscovered error. Test cases are devised with this purpose in mind. A test case is a set of data that the system will process as an input.

4.1 TEST UNITS

Test Case specification is major activity in the testing process. In this project, I have performed three levels of testing.

1. Unit Testing.
2. Integration Testing.

4.2 TEST CASE AND TEST REPORTS

4.2.1 UNIT TESTING

The first test in the development process is the unit test. The source code is normally divided into modules, which in turn are divided into smaller units called units. These units have specific behavior. The test done on these units of code is called unit test. Unit test depends upon the language on which the project is developed.

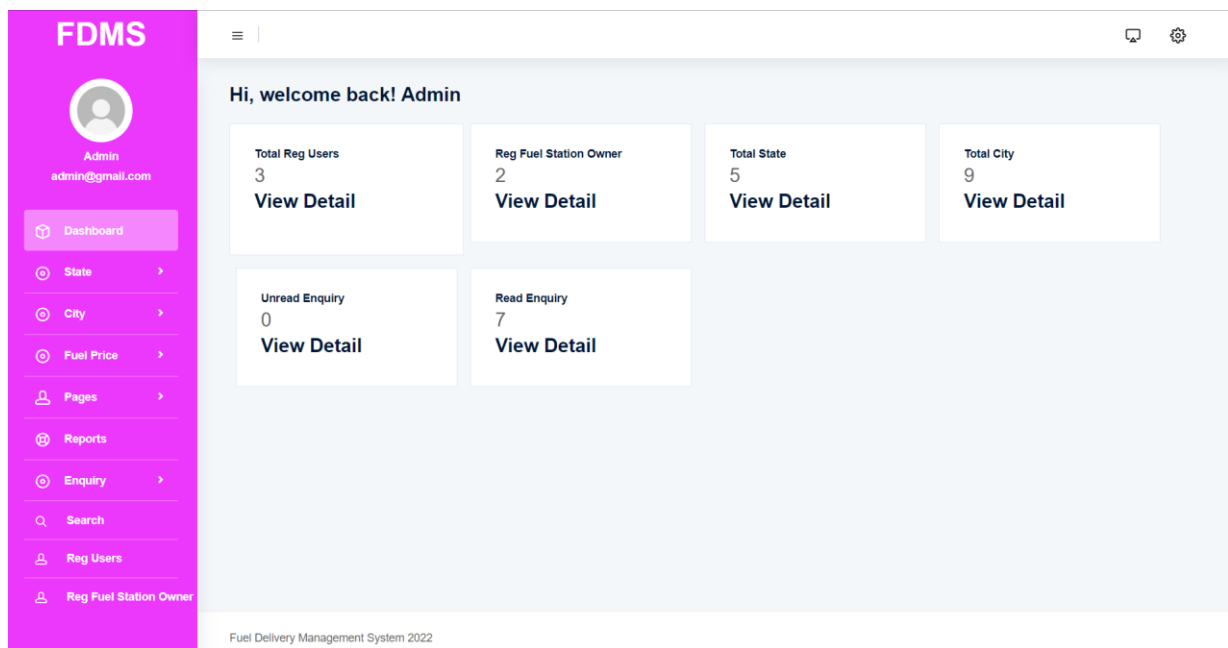

Fig 4.2.1 Unit Testing

4.2.2 INTEGRATION TESTING

Integration Testing follows unit testing and precedes system testing. Testing after the product is code complete. Betas are often widely distributed or even distributed to the public at large in hopes that they will buy the final product when it is release.

The screenshot displays the 'View Order Details' page of the FDMS. The left sidebar contains the FDMS logo, a user profile for 'Test' (testtest@gmail.com), and navigation links: Dashboard, Order your fuel, Order Status, and Search. The main content area is titled 'View Order Details' and contains three sections:

- Customer Details : (Order Number: 662376270)**

Full Name	Test
Mobile Number	9879779798
Email	testtest@gmail.com
- Fuel Station Details**

Name of Fuel Station	Manish Indian Oil	State of Fuel Station	UP
City of Fuel Station	Varanasi	Address of Fuel Station	CRXP+R29, Sardar Patel Marg, Madhopur, Varanasi, Uttar Pradesh 221001
- Order Details**

Order Received State	UP	Order Received City	Varanasi	Type of Fuel	Diesel
Fuel Price	86	Fuel Delivery Date	2022-06-29	Fuel Delivery Time	15:30
Quantity of fuel(in ltr)	10	Delivery Address	K-809, DDD, hfhgh	Mode of Payment	UPI
Order Final Status	Not Response Yet	Admin Remark	Not Updated Yet		

Fuel Delivery Management System 2022

Fig 4.2.2 Integration Testing

4.2.3 SYSTEM TESTING

The process of evaluating software during the development process or at the end of the development process to determine whether it satisfies specified business requirements. System Testing ensures that the product actually meets the client's needs.

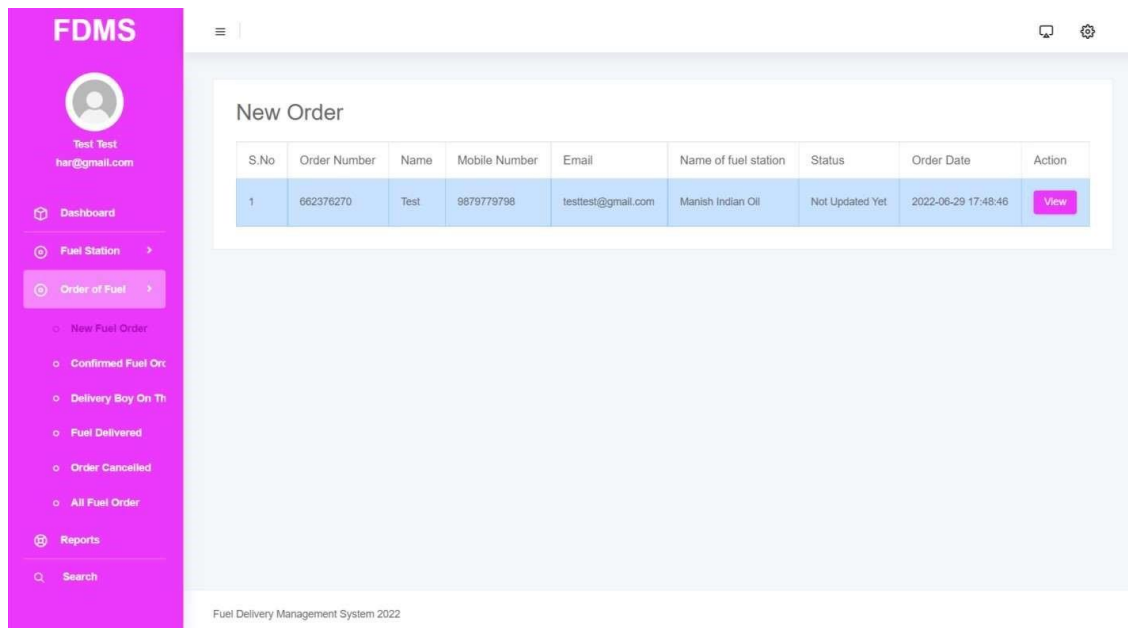

Fig 4.2.3 System Testing

5. CONCLUSION

This web application provides a computerized and automated version of Vehicle Fuel Delivery Management System which will benefit the fuel station companies and their users. It makes entire process online and can generate reports. It has a facility of user's login where users can view their order details.

The Application was designed in such a way that future changes can be done easily. The following conclusions can be deduced from the development of the project.

FUTURE ENHANCEMENT

- Automation of the entire system improves the productivity.
- It provides a friendly graphical user interface which proves to be better when compared to the existing system.
- It gives appropriate access to the authorized users depending on their permissions.
- It effectively overcomes the delay in communications.
- Updating of information becomes so easier.
- System security, data security and reliability are the striking features.
- The System has adequate scope for modification in future if it is necessary.

7.2 OUTPUT SCREEN

Admin Panel

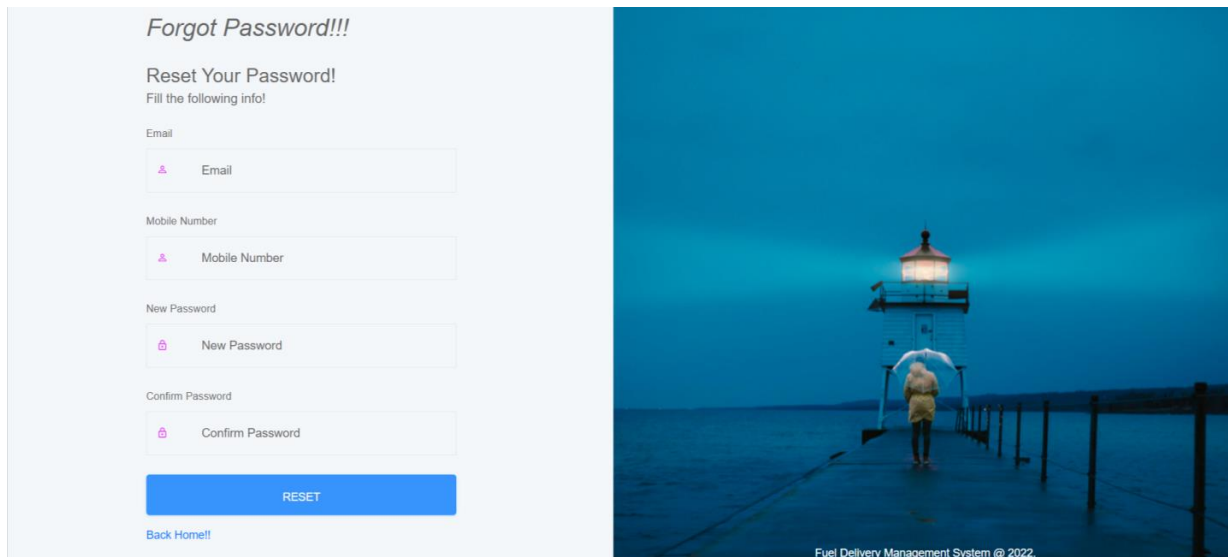

Login Page

The screenshot displays the Admin Panel Login Page. On the left, a light blue sidebar contains the title "Login Panel For Admin", a welcome message "Welcome back! Happy to see you again!", a "Username" field with the value "admin", a "Password" field with masked characters "***", a checked "Keep me signed in" checkbox, a "Forgot password?" link, a blue "LOGIN" button, and a "Back Home!!" link. On the right, a large image shows a person standing on a pier at night, looking at a lighthouse. The text "Home Loan Management System @ 2021." is visible at the bottom right of the image.

Fig 7.2.1 Login Page

Forgot Password

The screenshot displays the Forgot Password Page. On the left, a light blue sidebar contains the title "Forgot Password!!!", a reset instruction "Reset Your Password! Fill the following info!", an "Email" field with the value "Email", a "Mobile Number" field with the value "Mobile Number", a "New Password" field with the value "New Password", a "Confirm Password" field with the value "Confirm Password", a blue "RESET" button, and a "Back Home!!" link. On the right, a large image shows a person standing on a pier at night, looking at a lighthouse. The text "Fuel Delivery Management System @ 2022." is visible at the bottom right of the image.
